

The ParaBrush System

Airbrushing technology is over 100 years old, but as a productive medium, it is still very unknown. Our first Airbrushing System utilizes the unique and exciting techniques of James Jensen. This system contains a silent compressor built right in the case. Simply plug it in and you are ready to go. No more carrying around all your airbrushing supplies in a box and then having to pack around a compressor. Everything is built in. It even has the capability to run two airbrushes simultaneously.

Like each ParaGraphics System, you purchase more than a piece of equipment. We include all of the support and consultations that has helped us become the largest Associated Independent Network of artists, artisans and crafters in the world.

The ParaBrush System includes all of the following:

Iwata HP-A Airbrush

Iwata airbrushes are the best commercial grade airbrushes in the world. Profitable Hobbies offers only Iwata Airbrushes in our Professional ParaBrush System. You will be surprised at the difference a great quality airbrush can make.

Custom Molded Carrying Case

Every ParaGraphics System has a professional looking case. A Professional look will help you sell your work in the marketplace. This seamless, dust and moisture resistant case is specifically molded and designed to carry necessary airbrushing items. Airbrushing is a mobile business and running around with your system will make you grateful you have everything in one place, all the time. Simply plug in to any outlet and you are ready to airbrush. This case houses a silent compressor along with all necessary paints and supplies. Two air ports are built in so two airbrushes can be used at the same time.

Miniature Silent Compressor

This exciting product is the most important part of our Professional ParaBrush System. It is mounted inside of your carrying case and never needs attention. Simply plug your ParaBrush System into an 110 outlet, plug your airbrush hose in, and you are ready to paint.

Air Filter / Regulator

This is also mounted in the carrying case. This allows you to adjust the pressure for the project at hand. This regulator also has a built in filter to insure no harmful debris gets onto your work or into your airbrush. Moisture is also removed by this filter.

Airbrush Stand

This airbrush stand mounts inside the carrying case or can be mounted to any work station. It is designed to hold two airbrushes, this allows you to leave paint in your airbrush and set it down while you work with another airbrush.

Perfect Circle Cutter

This adjustable guide can speed up the most difficult task of airbrushing by cutting perfect circles in acetate film for you. It has a small cutting blade in the compass which cuts the film as you rotate it in your hand. Perfect circles every time--fast and easy.

Art Projector

Every serious airbrush artist should have an art projector. Ours is the best on the market. This tool allows you to project pictures and graphics up to billboard size if desired. This is a key element in our ParaBrush System. It is very easy to use and produces powerful results. You can enlarge almost any pattern with this projector.

Acetate Film

10 Sheets of .003 acetate pattern film are included in our ParaBrush System.

Liquid Frisket

This jar contains a liquid form of film that helps you do unusual textures and micro-definition in your airbrushing projects.

Texture Brushes

Some airbrushing projects require brush use to add texture and effects. A round and a fan brush is included in your ParaBrush System.

Video Instructions

Profitable Hobbies has always included video instruction with all our ParaGraphics Systems. This is the easiest and fastest manner of getting started next to hands on training, which we also offer (please call for details). This five hour series will take you from setting up your System to finishing an airbrushing project and everything in between.

Instructional Airbrushing Book

Many tips and secrets of professionals are shared in this exciting text. You will be amazed how you and your projects will benefit from a little reading and understanding of the Airbrushing World.

Other Useful Tools

Also included with your ParaBrush System is a mechanical pencil with extra lead, two respirators, a metal ruler, X-Acto Knife with extra blades, and necessary tools for cleaning and maintaining your system. We have gone to great lengths to make sure

you have everything you need when you go out into the marketplace.

Remember, Profitable Hobbies has a full-time staff to help you with and technical questions you may have. With the purchase of your ParaBrush System, you will receive lifetime toll free technical support.

Complete Parabrush System is only \$2995.00
